AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

- 1. (Currently Amended) A <u>unitary monolithic</u> device useable to connect adjacent vertebrae, the <u>unitary monolithic</u> device comprising: a stabilization member; a first anchoring member extending from the stabilization member; and, a second anchoring member extending from the stabilization member; wherein said stabilization member, said first anchoring member, and said second anchoring member form the <u>unitary</u> <u>monolithic</u> device <u>as a singe-pieced structure</u> for insertion into the adjacent vertebrae.
- 2. (Original) The device of claim 1 wherein said stabilization member is porous.
- 3. (Original) The device of claim 1 wherein said first anchoring member extends perpendicularly from the stabilization member.
- 4. (Original) The device of claim 1 wherein said second anchoring member extends perpendicularly from the stabilization member.
- 5. (Original) The device of claim 1 wherein said first and second anchoring members are parallel to each other.

- 6. (Original) The device of claim 1 wherein at least one of said first and second anchoring members is substantially cylindrical.
- 7. (Original) The device of claim 1 wherein at least one of said first and second anchoring members is porous.
- 8. 30. (Canceled)
- 31. (Previously Presented) The device of claim 7 wherein said at least one of said first and second anchoring members has a pore size between approximately 190 and 1,200 microns.
- 32. (Previously Presented) The device of claim 7 wherein said at least one of said first and second anchoring members has a pore size between approximately 190 and 230 microns.
- 33. (Previously Presented) The device of claim 7 wherein at least one of said first and second anchoring members includes a lumen extending therethrough for promoting the ingrowth of bone.
- 34. (Previously Presented) The device of claim 7 wherein both of said first and second anchoring members include a lumen extending therethrough for promoting the ingrowth

of bone.

- 35. (Previously Presented) The device of claim 2 wherein said stabilizing member has a pore size between approximately 190 and 1,200 microns.
- 36. (Previously Presented) The device of claim 2 wherein said stabilizing member has a pore size between approximately 190 and 230 microns.
- 37. (Previously Presented) The device of claim 2 wherein the stabilizing member includes a lumen extending therethrough for promoting the ingrowth of bone.
